

Affiliate Manager (BROK_AFFILIATES): Can I assign different payout percentatges for different products?

(2004/05/18)As of 2004/05/18 this is not a feature of the module. However, some merchants get around this by using the product's cost field. They set the payout to occur as a percentage of the product cost and that same percentage will be used for all products then they adjust the product's cost according to the payout they want to give for that product.
