

## *Order Status 5.x (BROK\_ORDERSTATUS5): Displaying collected data in emails and on the invoice (INVC) screen*

How can I display the note and other data I collected from the customer in the customer notification email and/or on the invoice screen during checkout?

After the payment information page is submitted (the page where the payment information such as credit card number, etc.) the Order Status Manager defines some variables which can be displayed in the

Customer notification email (assuming that you are using the stock "Customer Order Confirmation HTML Email" module in "HTML Email" mode) and on the invoice page. The variables to use in the template

for the "Customer Order Confirmation HTML Email" and in the template for the "Invoice" page are:

`&mvt:global:OrderStatusManager:note;`

`&mvt:global:OrderStatusManager:note2;`

`&mvt:global:OrderStatusManager:field1;`

`&mvt:global:OrderStatusManager:field2;`

`&mvt:global:OrderStatusManager:field3;`
